DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8 drawn to a method in a dispensing cabinet focusing on access control, classified in class 700, subclass 237.
 - II. Claims 9-17 drawn to a method of monitoring inventory in a dispensing cabinet, classified in class 700 subclasses 236.
 - III. Claims 18-23 drawn to a memory device for controlling a dispensing system, classified in class 700 subclass 231.
2. Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as securing valuables. See MPEP § 806.05(d). In the instant case, invention II has separate utility such as restocking of inventory. MPEP § 806.05(d). Invention III has separate utility such as transfer of programs.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. No claims appear to be linking claims.
